TITLE : INTERIOR MATERIAL FOR
 AUTOMOBILE

ABSTRACT : PURPOSE: To provide an interior material for automobile with high gain omnidirectional antenna system.

CONSTITUTION: A front garnish 45 covering a front pillar of a car body of an automobile toward an interior side of the car body is made of a resin component 61 and an antenna system 63. The resin component 61 is mounted to cover the metal-made front pillar toward the interior of the car body. The antenna system 63 is formed by adhering an antenna wire 82 to a film sheet 81 and connecting a connector 88 to the end of the antenna wire 82. The antenna system 63 is mounted to a rear side of the resin component 61 by a resin-made clip 62 and the resin component 61 is mounted to the front pillar by the clip 62. A gap between the antenna wire 82 and the front pillar when the front garnish 45 is mounted to the front pillar is set to be 5-50mm. The connector 88 is connected to a key-less entry device locking/unlocking a door lock. Thus, omnidirectivity is provided to the antenna system 63 with a high gain and mounted easily with excellent appearance.
